

All commands are run from the root of the directory.

Conda Environment

Please run

```
conda env create -f conda_env.yml
```

to activate conda, please run

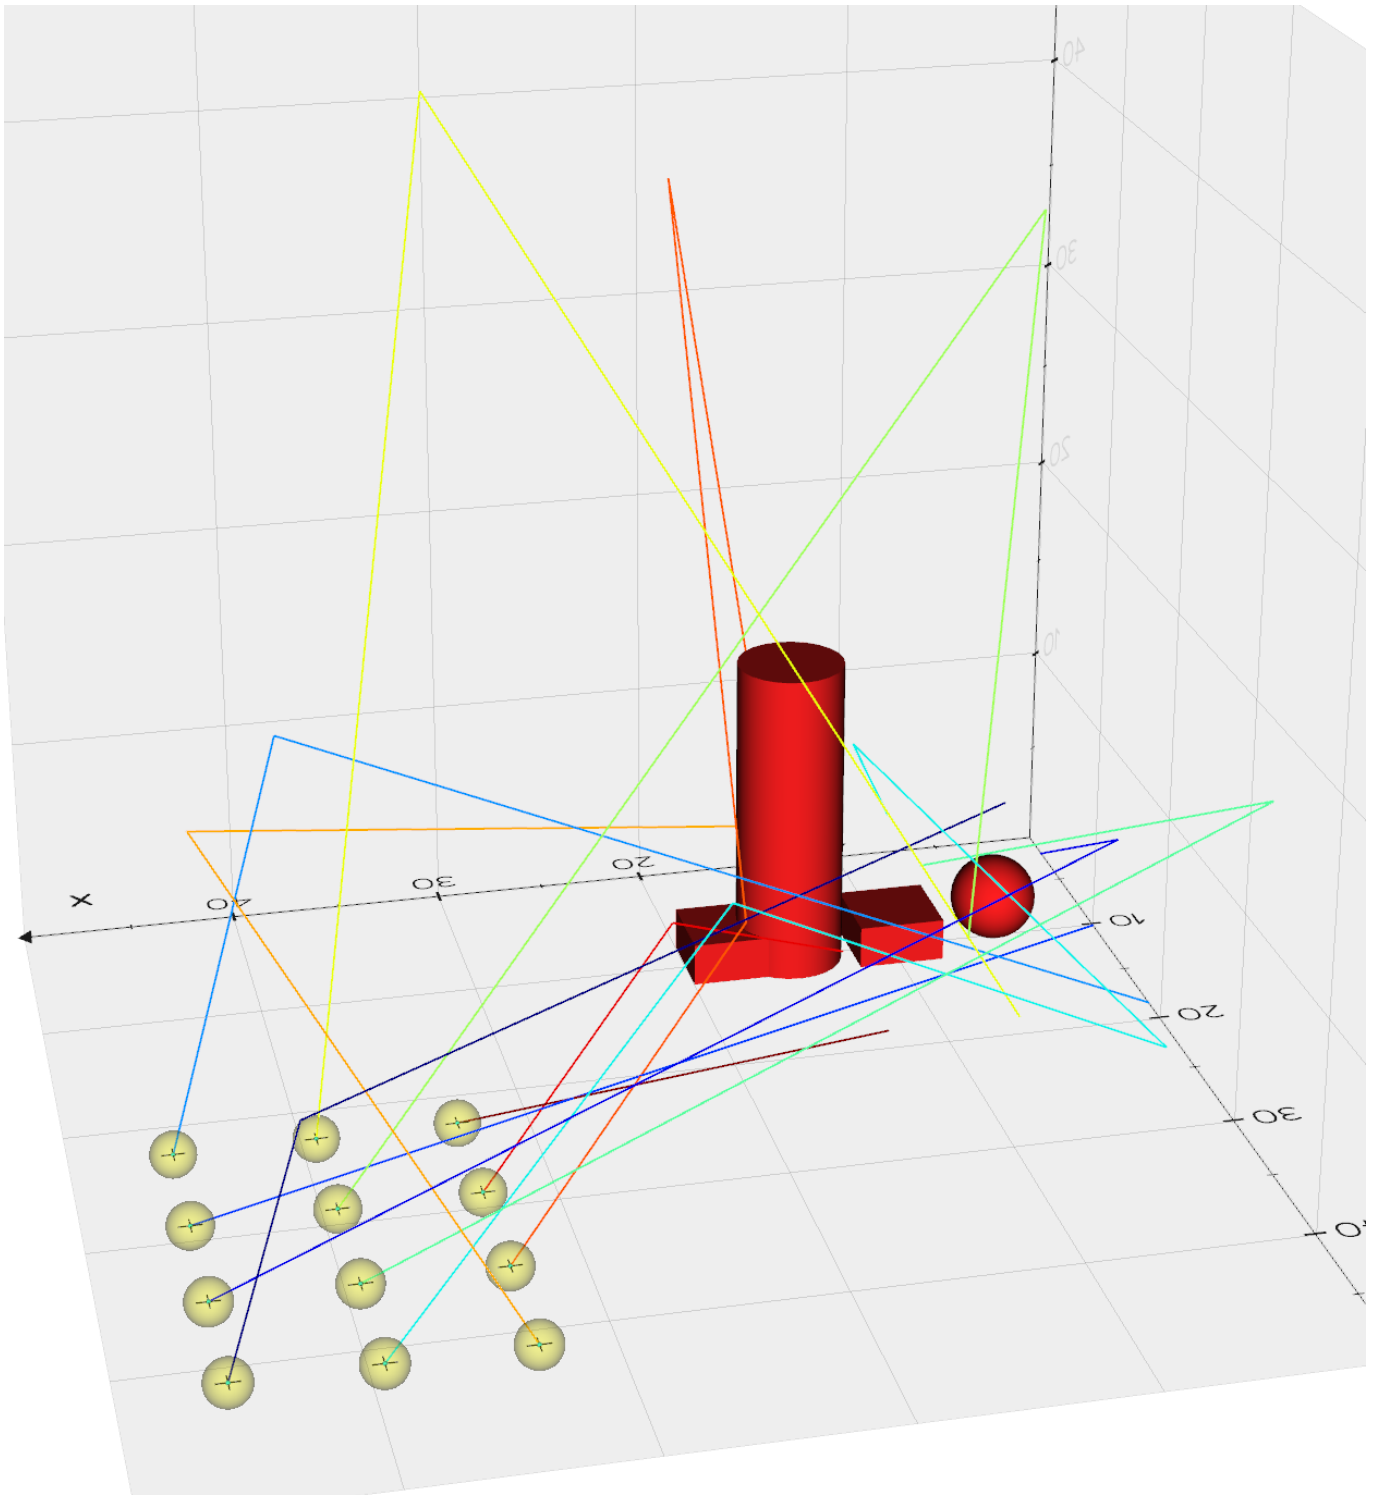

```
conda activate comp4620-a1-yasaradeel
```

To do a simple run, please run

```
python multi_demo.py --env path_to_your_yaml
```

Examples

```
python multi_demo.py --env multi_drone_obs/env2.yaml
```

Use the arguments as provided in the argspace or use default ones.

Code

All of it exists in the MultiPlanner directory. I have tried to give it a modular package structure.

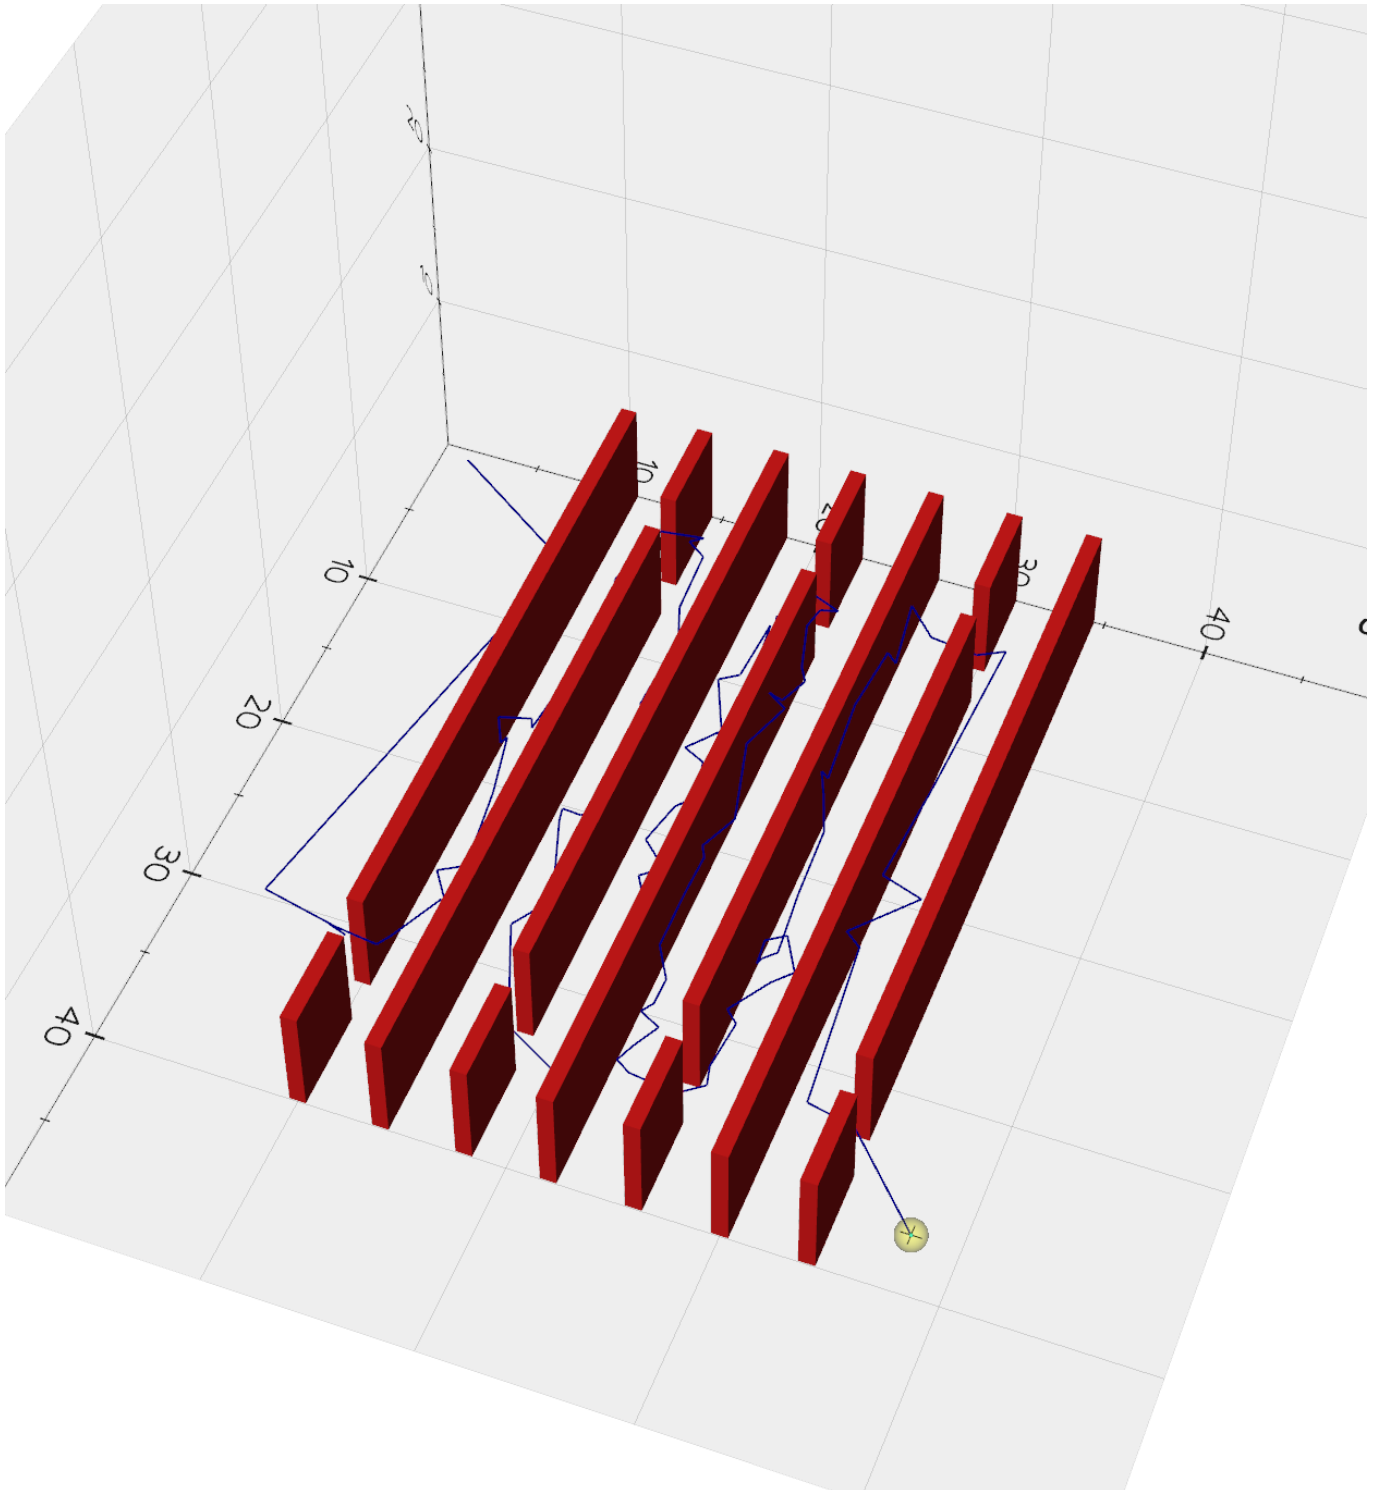

Environments are in

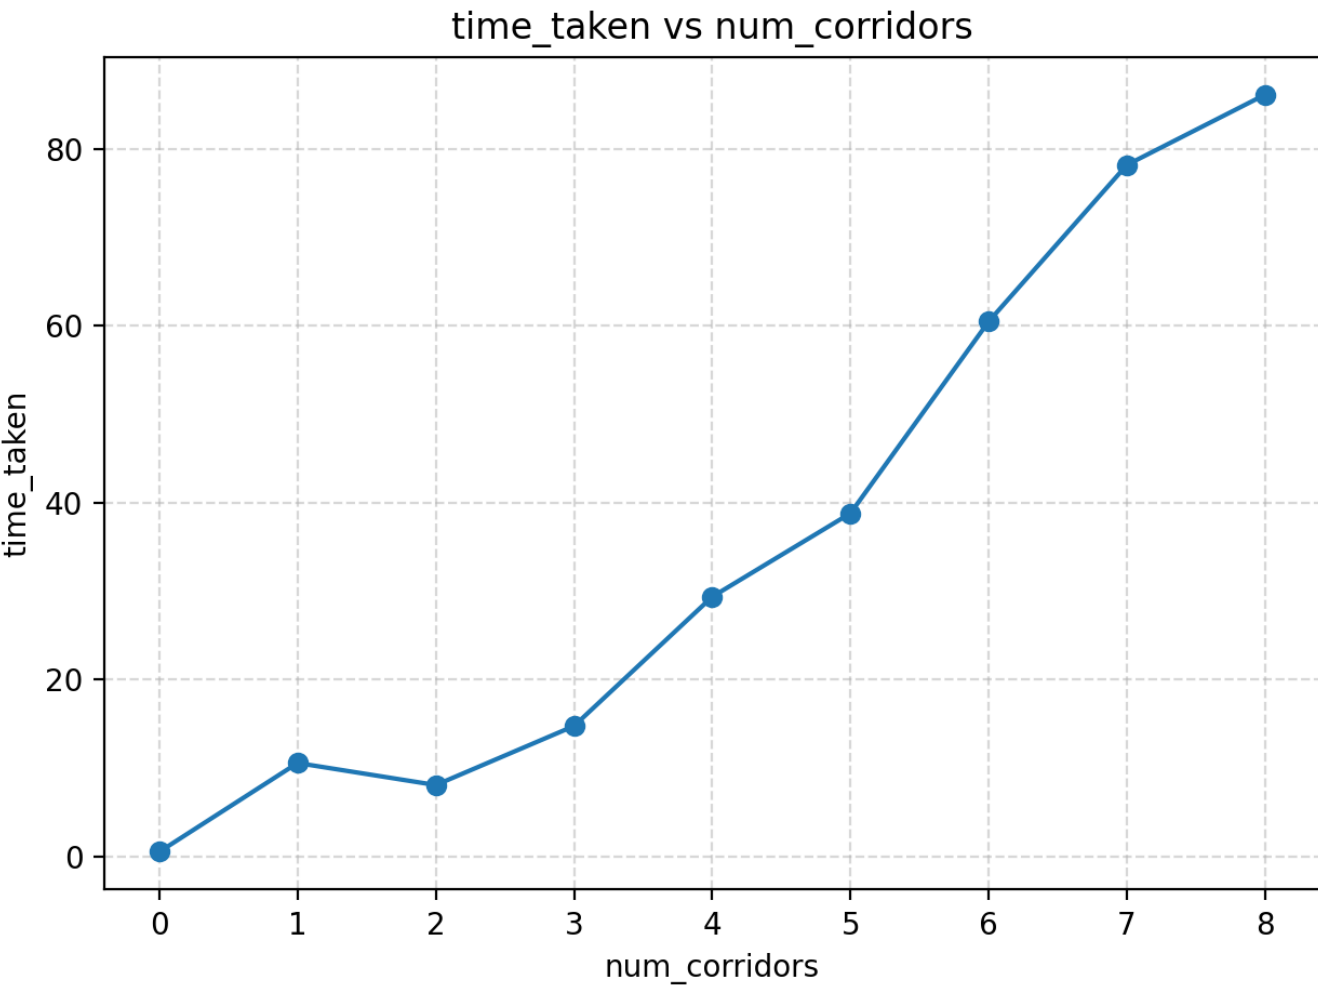

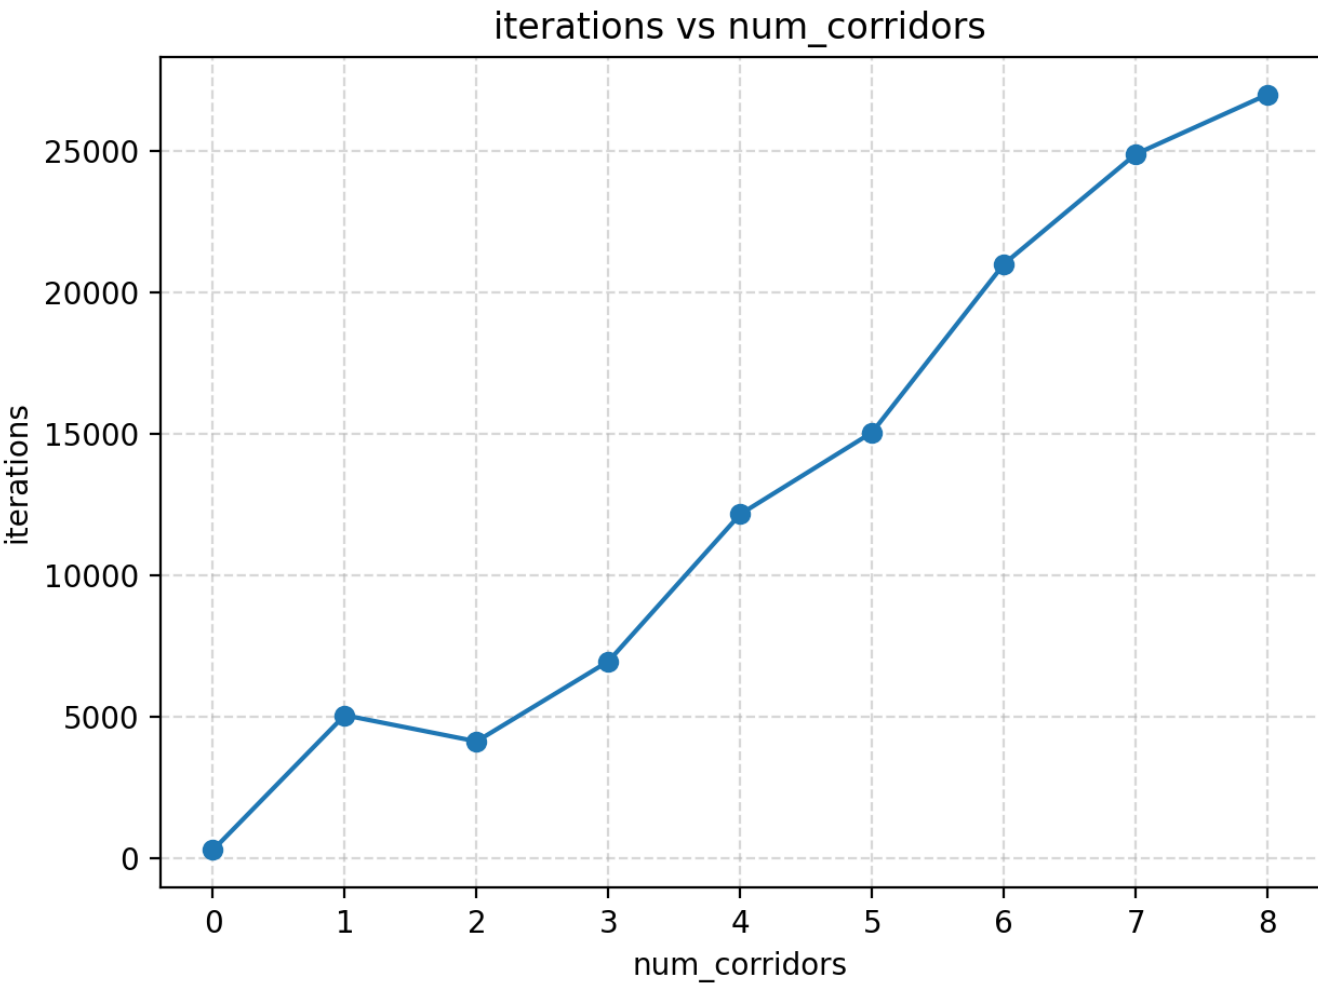

- complexity_test_envs
- multi_drone_obs
- single_drone_obs

Space Complexity Test

```
python space_complexity_test.py
```

A single drone goes over different corridors.

Drone Complexity Test

```
python drone_count_complexity_test.py
```

Multiple Drones try to navigate through 2 corridors.
